

HERCULES

Hose Rack Assembly

The Hercules hose rack assembly provides a neat way of keeping fire fighting hoses.

In times of emergency, the water source is turned on and the in house fire fighter can immediately run out with the fire hose as everything is already preassembled.

After the fire is put out, the hose can be neatly tucked back into the hose rack assembly for future use.

Features

- Provides an immediate water source for fire fighting
- One man operation
- Suitable for building occupant use
- Conforms to NFPA standards for Class II service
- Suitable for standard white hose up to 30 meters in length.
- Different connections can be used for national standards
