

HERCULES

Portable Hose Binding Machine

Application

- Required for binding hoses. Especially useful when workshops do not have fixed positions.

Features

- Safe & Reliable
- Simple & easy to operate
- Very compact,

In European fire fighting practice, it is the usual practice to bind hoses for delivery and suction with wire. This wire is applied by means of a manual operated binding device as pictured.

Frame made of light metal, equipped with wire guide-roll, wire reel with 500 g binding wire zinc-plated Ø 1,4 mm for delivery hoses, wire brake, crank for spooling the wire.

For wire binding with the manual binding apparatus you simply have to lead the apparatus round about the fixed coupling.

Additional device for the manual hose-binding apparatus to fix the coupling (from 38 to 110 mm diameter) during the binding process. The device has to be fixed onto a bench.
