

Singapore Fire Hydrant

Wye Divider (Y Divider)

A fire fighting hose is usually used to connect a water source such as a fire hydrant or portable fire engine water tank to the wye divider's inlet. The wye will divide a hose line into two lines of the same or smaller size.

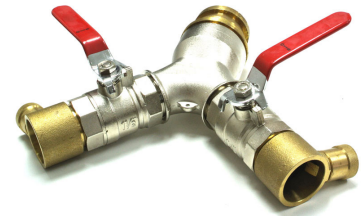

The connecting inlet and outlets can be customized of any national standard fire hose coupling.

Each outlet can have a on / off valve installed to allow better control over the water flow. The on / off valve can be a hand wheel or quarter turn on / off valve (Just like the one in the image).

The material of the wye divider can be either brass to be heavier or aluminium to be lighter depending on the needs of the firemen.

Construct

- Aluminium or brass body. Both are resistant to rust.
 - 2.5" Inlet to 2 x 1.5" Outlet
 - 2.5" Inlet to 2 x 2.5" Outlet
-
- Highly customizable inlet and outlet for all needs.

Information

Wye Divider, 1 x Inlet 65mm BS336 Male, 2 x Outlet 38mm BS336 Female
