

# HERCULES

## Trolley For Portable Fire Extinguisher

The Hercules trolley for portable fire extinguisher is made for users that have no easy or fixed location to install portable fire extinguishers.

At full weight, a portable fire extinguisher can easily exceed 15KG which makes it difficult to carry the fire extinguisher to the fire fighting area.

With the single handle grip and rubber wheels, this makes it much more convenient to move the fire extinguishers around.

Also very useful when portable fire extinguishers are needed only temporary not permanently. This includes exhibition halls or outdoor tentage areas that will be removed shortly after the events are over.

- Single handle grip and rubber wheels for easy transportation
- An optional Flag with fire extinguisher symbol can be added for increased visibility.
